01 Test Environment

FIELD	VALUE
App name	PuniCodex: The Gods' Keyboard
Android package	`com.punicodex.app`
App version	1.3.15 (version code 29)
Device	Sharp AQUOS R7 (A202SH)
Android version	14 (SDK 34)
Screen resolution	1260 × 2730

- Tested by: Our QA team

02 App Overview

PuniCodex is a keyboard and companion app for writing the names of gods and heroes with their scholarly spelling and special characters. The companion app has five tabs. Type looks up a name such as "zeus" and shows its accented and native forms with domain and meaning. Compose suggests conversions inside free text, Saved keeps favourites, Directory lists over 7,700 Unicode characters, and Keyboard explains the PuniCodex keyboard, which adds an Ω character directory to any app.

03 Product Perspective

The idea is unique and the reference content is rich, and this build fixes two problems from the previous round. Compose no longer offers to turn "The" into a symbol, and the empty "Flagship Lore" panel is gone. The Directory is now the weak spot, because a character sheet cannot be closed once opened, and the keyboard's own overlays still let other content show through.

04 Test Coverage

AREA	RESULT
Type lookup for "zeus" with domain, meaning and source tags	● PASS
Compose with "The wrath of achilleus angered odin"	● PASS
Opening the Zeús temple page from a result	● PASS
Directory character sheet with Close, Back, tapping outside and dragging down (see C-01)	● FAIL
PuniCodex keyboard in another app (see M-01)	● FAIL
Ω directory over another app in dark and light settings (see M-02)	● FAIL

05 Standard Checks

- Pass — Bottom navigation: Type, Compose, Saved, Directory and Keyboard sit above the system navigation bar.

06 Critical / Core-Feature Issues

C-01 A Directory character sheet cannot be closed

Impact: After opening any character, users are stuck on its sheet and must close the whole app to use any other tab.

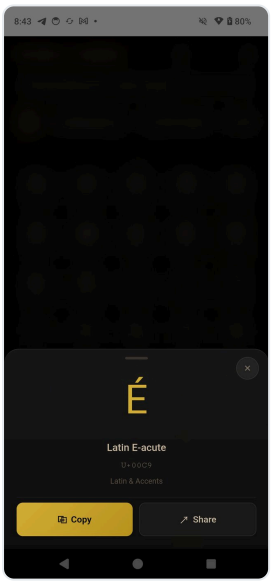

Steps to Reproduce:

1. Open PuniCodex and tap "Directory".
2. Tap any character, for example "É".
3. Tap the round × button at the top right of the sheet.
4. Press the phone's Back button, tap the dimmed area above the sheet, and drag the sheet's handle down.

Expected: Any of these closes the sheet and returns to the character list.

Actual: The sheet for "Latin E-acute" stays open after every attempt, including after waiting 10 seconds and trying again. The × shows a pressed highlight but nothing closes, Back is ignored, and the list behind stays dimmed. The app does not crash or report as frozen, so the sheet's close actions appear not to respond at all. We reproduced this from a fresh start of the app with "Á" and "É".

07 Minor Issues

M-01 The keyboard's top bar text is black on black

Impact: Users cannot read the keyboard's own bar, so they may not realise it is the PuniCodex keyboard or that the bar is where suggestions appear.

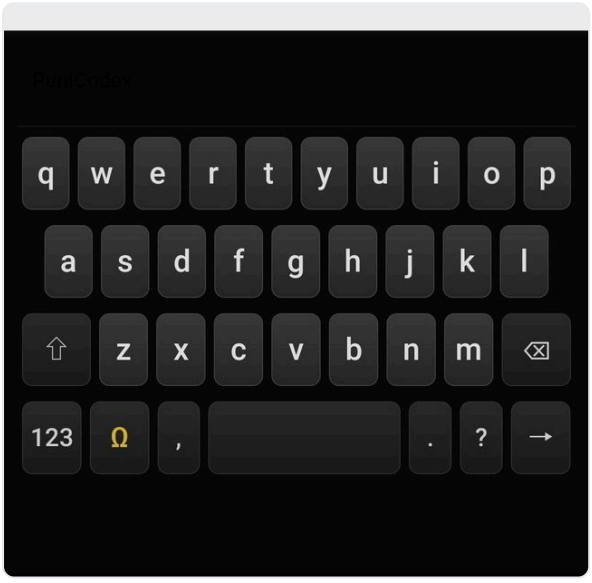

Steps to Reproduce:

1. Set PuniCodex as the keyboard.
2. Tap a text box in another app, here the address bar in Chrome.
3. Look at the strip above the letter keys.

Expected: The text on the strip is clearly readable against its background.

Actual: The word "PuniCodex" is drawn in black on the near-black strip and can only just be made out.

Verified: ✓

M-02 The Ω directory lets the app and keys behind it show through

Impact: The symbol picker is cluttered and harder to read, which makes choosing the right character slower.

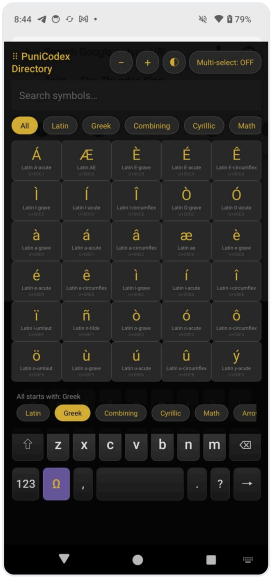

Steps to Reproduce:

1. Set PuniCodex as the keyboard and tap the address bar in Chrome.
2. Tap the "Ω" key.
3. Look at the title, the search box and the row of category chips near the bottom.
4. Tap the half-circle button to switch the directory to its light setting.

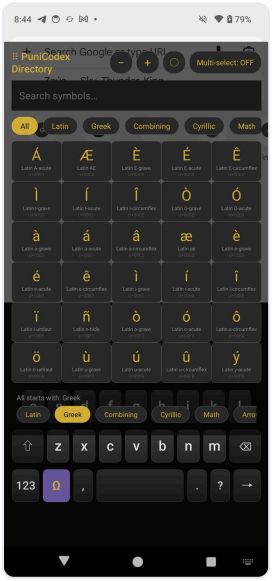

Expected: The directory has a solid background that hides the app and keys behind it.

Actual: Chrome's "Search Google or type URL" and the "Zeús — Sky, Thunder, King" page title show through behind "PuniCodex Directory" and its buttons, and the letter keys "a s d f g h j k l" show through behind the "All starts with Greek" row. The light setting makes the overlap stronger, with Chrome's text clearly visible across the header.

08 Suggestions

- S-01 — Ω directory: Label the "−", "+" and half-circle buttons, or move them into a clearly named keyboard settings area.
- S-02 — Type results: Make the gold source tags such as "LSJ", "PAPE-BENSELER" and "BEEKES" brighter so they stand out on the black card.
- S-03 — Ω directory: Reword the "All starts with Greek" line above the bottom category chips, as it is unclear what it refers to.

09 Summary

We looked up names, composed a sentence with a god's name, browsed the character Directory and used the PuniCodex keyboard and its Ω directory in another app. Name lookup and Compose work well, and the previous problems with "The" and the empty "Flagship Lore" panel are fixed. A Directory character sheet now cannot be closed at all, and the keyboard's bar and Ω directory have readability problems. The Directory sheet should be fixed before release, as it traps users until they restart the app.

10 About this report

This report was prepared by PrimeTestLab from testing performed on the device, build and testing window recorded in this document. Verdicts and severity ratings describe the behavior observed during that testing session.

If you have a question about any finding in this document, open the report in your PrimeTestLab dashboard and send a reply. Our team follows up on the same page.

This document was prepared for the client named on the cover. It may describe an unreleased build of your application, so please treat its contents as confidential.
